### Comex Gold - Continuous Daily February 5

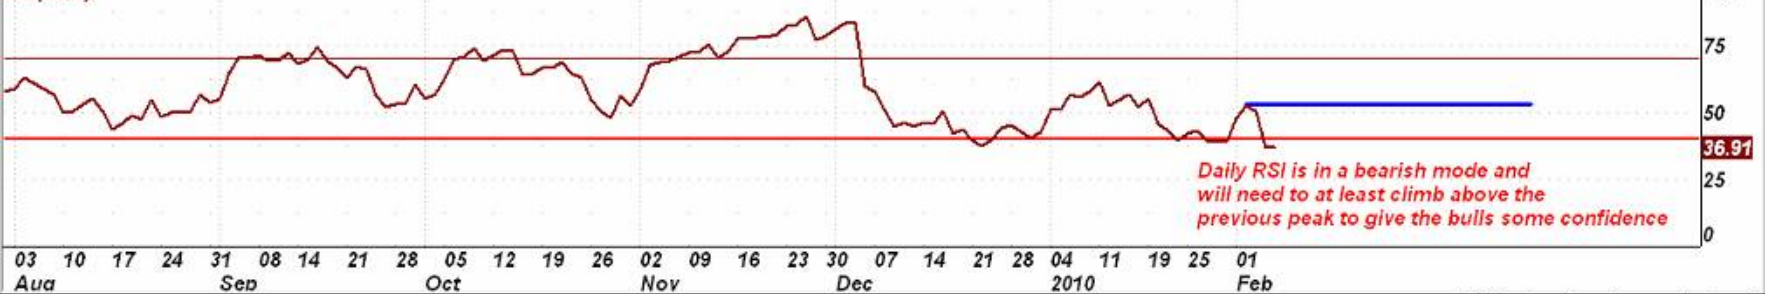

former resistance level  
 now becomes support  
 (now resistance again)

this region is the next level of support

Buyers showed up later in the session and took gold off its worst levels bouncing from just above the support level shown on the chart pushing into positive territory at one point. The spike from the support level is very intriguing. Bulls will need to recapture broken support near \$1,080 to give them some breathing room and break the confidence of some of the shorts.

© eSignal, 2008

RSI(14,C)

Daily RSI is in a bearish mode and will need to at least climb above the previous peak to give the bulls some confidence
